

Computer Science internship at Conversation Starter BVBA

Conversation Starter is an Antwerp based company that facilitates matchmaking at business events. Using the web application, attendees discover who they should talk to and can easily schedule meetings.

Some of our clients are ING Bank, VOKA, UNIZO, VDAB, Ernst & Young and City of Antwerp.

Conversation Starter was founded by Rutger Bevers and Niels Peetermans, a strong team that combines computer science expertise with many years of event organisation experience.

Being an intern at Conversation Starter means working in a young environment, with the latest technologies (full-stack JavaScript) on projects that ship quickly. In a nutshell: you will make an impact.

More information about our company can be found at www.conversationstarter.net.

What you will do

Today, the Conversation Starter web application has only been developed for event attendees. In order to grow our business internationally, we need to build new tools for the event organiser and our own Conversation Starter sales people.

You will get detailed specifications from our product designer, discuss technical feasibility and make the technical analysis. Together with the CTO, you will take technical decisions and then: time to code!

About you

- Computer Science student with a strong interest in building web applications.
- Conversation Starter is built with the MEAN stack (MongoDB, Express, AngularJS and Node.js). Experience with this stack is a plus. However, motivation and ability to learn quickly are more important.
- Bonus points if you're interested in entrepreneurship. Since you will be able to work directly with the founders, you will be able to learn about the different aspects of running a company.

Up for a challenge?

- Let us know at rutger@conversationstarter.net and tell us about your web development projects (both at school and in your spare time).
- No deadline - talent is always welcome.
