Apply for Internship at SAP Belgium and Innovate – SAP 2018 Best Place to Work by Glassdoor

We are looking for interns who work in our “Maker’s lab” to create innovating and engaging proof of concepts (both physical as virtual). The goal of this internship is to explore and learn about the newest technologies and to create prototypes that “woooow” our customers.

As an intern you will collaborate within a highly skilled team. You will be able to create Internet of Things / innovative use cases, build mobile apps, dashboards, interactive scale models, animated dashboards, 3D models, plays with drones, etc.

If you are a student in Computer Science, Software Engineering or Electronic Engineering who likes to learn and work on mobile apps, fiddle with electronics, Raspberry Pi’s, Arduino’s, sensors, and many other technologies. Then this is what you are looking for. If you have the mindset of a “maker” and have some experience with the Internet of Things, that would be a huge advantage.

• The internship is a paid internship for a minimum of 2 months. SAP Knowledge is NOT mandatory.

• Interested Apply now by sending your CV to philippe.nemery@sap.com

SAP serves more than 400 000 customers worldwide in 180 countries in industries as Sport and Entertainment (WTA, RSC Anderlecht, Bayern Munich, Cirque du Soleil), Retail, Energy, Finance, Manufacturing, etc. SAP is transforming industries, grow economics, lift up societies and sustain the environment by engineering solutions to fuel innovation and help companies to digital transform and reinvent themselves.
