The Department of Art Studies and Archaeology, Vrije Universiteit Brussel 
The Science and Technology in Archaeology Research Center, The Cyprus Institute 

invite you to

a digital FUTURE for our PAST?

How can cultural heritage research benefit of digital imaging and scientific visualisation? 
How can we realize a semantic integration of information and meaning in a heterogeneous and pluri-disciplinary universe?

These questions will be addressed on Friday 11 March 2011 during a one-day workshop at the Vrije Universiteit Brussel by members of the research group STARC at the Cyprus Institute. Via a problem orientated approach, they will particularly discuss:

- GIS: an indispensable tool in archaeological research
- Modelling in n dimensions: using computer generated outcomes to interpret changes through time and space of natural, anthropogenic or social landscapes
- 3D-modelling: a research as well as a communication tool
- Digital documentation of cultural heritage and its European perspective

**Programme:**

8.30-9.00 Welcome
9.00-11.00 Plenary lecture in hall Q-D
11.00-11.30 Coffee break
11.30-12.30 Introduction to ‘Try it yourself’ workshop
14.00-15.30 ‘Try it yourself’ workshop (session 1) in computer lab of the Faculty of Arts and Philosophy (Building C, 5th floor, room 446)
15.30-17.00 ‘Try it yourself’ workshop (session 2) in computer lab of the Faculty of Arts and Philosophy (Building C, 5th floor, room 446)

The ‘Try it yourself’ workshop is open to everybody and free of charge. However, registering is mandatory due to the limited number of available places.

**Friday**  
11 March, 2011
